

SCALABILITY & FUTURE PLAN

Date	30sep2026
Team ID	SWTID-2026-7796
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	1 Mark

Scalability & Future Plan

This document outlines how the current ServiceNow solution for automating standard laptop orders can be scaled to handle larger user bases, increased procurement requests, and extended automation features in the future. The roadmap focuses on improving the existing Flow Designer workflow beyond its current implementation.

Current System Limitations

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	The current workflow is focused mainly on Standard Laptop procurement.	Other IT hardware requests may still require separate workflows or manual processing.	Medium
2	The implemented flow creates and assigns a Catalog Task after approval.	Scaling to many request types may require additional automated task handling and routing.	Medium
3	The current project documentation does not define advanced monitoring or analytics for large request volumes.	Difficulties may arise in monitoring workflow performance and resource utilization as usage increases.	Medium

Scalability Plan

S.No	Scalability Aspect	Current State / Proposed Upgrade / Solution
1	User Load	Current State: The workflow supports Standard Laptop requests through the Service Catalog. Proposed Upgrade: Extend the automated workflow to handle a larger number of simultaneous requests and additional IT procurement users.
2	Data Storage	Current State: Requests, Requested Items, approvals, and Catalog Tasks are maintained within ServiceNow. Proposed Upgrade: Improve data organization and retention as procurement records increase.
3	Performance	Current State: Flow Designer automatically processes approved requests and creates Catalog Tasks. Proposed Upgrade: Monitor workflow execution and optimize

		automation for higher request volumes.
4	Security	Current State: Approval is required before the Catalog Task is created, and the task is assigned to the Hardware group. Proposed Upgrade: Strengthen role-based access, approval controls, and audit monitoring for expanded usage.

Future Roadmap

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Extend Flow Designer automation for additional standard IT hardware requests.	Short Term	Reduces manual intervention across more procurement activities.
Phase 2	Add enhanced workflow monitoring and reporting for request and Catalog Task processing.	Medium Term	Improves visibility into workflow status and operational performance.
Phase 3	Introduce more automated task routing and resource allocation based on procurement requirements.	Medium Term	Improves resource utilisation and reduces delays in task assignment.
Phase 4	Expand the solution with advanced procurement automation and integration capabilities.	Long Term	Provides a more scalable and seamless IT procurement experience.

Conclusion

The current ServiceNow Flow Designer solution streamlines Standard Laptop procurement by automatically creating Catalog Tasks and assigning them to the Hardware group after approval. Future scalability can focus on supporting larger request volumes, improving monitoring and performance, strengthening security controls, and extending automation to additional IT procurement processes.
