

Coding & Solution

Header Information

Field	Details
Date	30 sep 2026
Team ID	SWTID-2026-7796
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	5 Marks

Solution Summary

Field	Details
Repository Link / URL	ServiceNow Developer Instance (dev409451.service-now.com / dev429721.service-now.com)
Programming Language(s)	JavaScript (ServiceNow Glide API / Low-Code Logic)
Framework(s) Used	ServiceNow Flow Designer, Process Engine, Service Catalog
Key Features Implemented	• Automated Flow Creation ("Standard laptop task") running as System User in Global Scope • Service Catalog trigger integration listening for procurement events • Automatic generation and field population of Catalog Tasks (sc_task) assigned to Hardware group • Process Engine linkage to the "Standard Laptop" item under Maintain Items

Field	Details
	• End-to-end request checkout, approval handling, and downstream task generation (REQ -> RITM -> SCTASK)
Pending / Incomplete Features	None (All core planned features fully configured, active, and verified)
Setup / Run Instructions	1. Navigate to Process Automation > Flow Designer and ensure flow "Standard laptop task" is activated. 2. Go to Maintain Items, select Standard Laptop, and confirm the flow is attached under the Process Engine tab. 3. Open Service Catalog > Hardware > Standard Laptop and click Order Now. 4. Navigate to the generated Request (REQ), approve the approval record, and verify that the Catalog Task (SCTASK) automatically generates and routes to the Hardware assignment group.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments

The solution replaces manual IT intervention with an event-driven ServiceNow workflow. By tying catalog submissions directly to automated Flow Designer logic via the Process Engine,

catalog tasks (`sc_task`) with required short descriptions and assignment groups ("Hardware") are dispatched immediately upon request approval. This minimizes turnaround time and prevents configuration delays in the hardware procurement pipeline.
