

Requirement Analysis Phase

Project Title: Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer

Team ID : SWTID-2026-7796

1. Introduction

The main purpose of this project is to automate the **standard laptop procurement process in ServiceNow using Flow Designer**.

The system should allow users to request a standard laptop through the Service Catalog. After the request is approved, a catalog task should be automatically created and assigned to the **Hardware** team for laptop configuration.

2. Problem Statement

The existing IT procurement process involves manual work and may cause delays in processing standard laptop requests.

Laptop configuration tasks may be missed or delayed after the request is placed. This can increase user waiting time and create inefficient resource utilization.

To solve this problem, the project automates the process using:

- Service Catalog
- Approval process
- Flow Designer
- Catalog Task
- Hardware Assignment

3. Requirements

Functional Requirements

1. Create a **Standard Laptop** service catalog item.
2. Allow users to place a standard laptop request through the Service Catalog.
3. The request should go through the required **approval process**.
4. Create a Flow named “**Standard Laptop Task**”.
5. Use **Service Catalog** as the trigger for the flow.
6. Automatically create a **Catalog Task** after the request is approved.
7. Set the short description as “**Laptop need to Configured**”.

8. Set the description as “**Laptop need to Configured**”.
9. Assign the catalog task to the **Hardware** assignment group.
10. Set the approval value as **Approved**.
11. Assign the created flow to the **Standard Laptop** service catalog item.
12. Test the workflow by placing a laptop order and checking the generated catalog task.

4. Non-Functional Requirements

- The system should reduce **manual intervention**.
- The workflow should improve the **efficiency** of IT procurement.
- The system should reduce **processing delays**.
- The system should minimize **human errors**.
- The system should improve **resource utilization**.
- The configuration should provide a smooth and efficient user experience.

5. Expected Outcome

After implementing the requirements, the approved standard laptop request should automatically generate a **Catalog Task** with the required description and assign it to the **Hardware** team.

This automation should reduce manual work, minimize user waiting time, and ensure that laptops are configured promptly.

6. Conclusion

The requirement analysis identifies the requirements needed to automate the **standard laptop procurement and configuration process**. These requirements will be used in the next phase to design and implement the **Flow Designer workflow in ServiceNow**.
