

Project Development Phase

Project Title: Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer

Team ID : SWTID-2026-7796

Introduction

The Project Development Phase involves implementing the planned automation in **ServiceNow Flow Designer**. The development connects the Standard Laptop Service Catalog request with an automated task creation and assignment process.

2. Flow Development

The following steps are carried out during development:

1. Open **ServiceNow**.
2. Open **Flow Designer** from Process Automation.
3. Create a new **Flow**.
4. Give the Flow name as “**Standard Laptop Task**”.
5. Select **Global** as the application.
6. Select **System User** as the Run As option.
7. Save the Flow.

3. Trigger Development

A **Service Catalog** trigger is added to the Flow. This trigger starts the workflow when the Standard Laptop service request is processed.

4. Catalog Task Development

The **Create Catalog Task** action is added to the Flow.

The task is configured with:

- **Request Item:** Requested Item Record
- **Short Description:** Laptop need to Configured
- **Description:** Laptop need to Configured
- **Assignment Group:** Hardware
- **Approval:** Approved

After configuring these values, the Flow is saved and activated.

5. Service Catalog Integration

The developed **Standard Laptop Task** Flow is assigned to the **Standard Laptop Service Catalog** item. The existing process automation is removed and the new Flow is added.

6. Testing and Verification

The developed system is tested by:

1. Opening the **Standard Laptop** Service Catalog item.
2. Selecting **Order Now**.
3. Checking the order status.
4. Opening the request number.
5. Approving the request.
6. Opening the Requested Item.
7. Checking the **Catalog Tasks** section.
8. Verifying the task description and **Hardware** assignment group.

7. Expected Development Output

The completed development should automatically create a laptop configuration task after the request is approved and assign the task to the **Hardware** team. This reduces manual intervention and helps ensure timely laptop configuration.

8. Conclusion

The Project Development Phase implements the designed workflow using **ServiceNow Flow Designer**. The developed system automates the Standard Laptop request, approval, task creation, and Hardware assignment process.
