

Project Initialization and Planning Phase

Date	15 March 2026
Team ID	SWTID-2026-7796
Project Title	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Team Details	Leader: POORNA LAKSHMI M Members: Vajitha T, Sneka N, Kanisiya G (Team Size: 4)
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) Report

The proposal report aims to transform the IT procurement lifecycle by deploying ServiceNow Flow Designer, boosting operational efficiency and request turnaround time. It eliminates manual overhead and communication delays, ensuring seamless service catalog ordering, automated approval workflows, and immediate task provisioning to hardware teams.

Project Overview	
Objective	The objective is to implement an automated workflow using Flow Designer to facilitate the procurement and configuration of standard laptops. By integrating automation, the project creates a seamless user experience, reduces manual errors, optimizes resource allocation within the IT department, and enhances productivity.
Scope	Encompasses end-to-end IT service request fulfillment: Service Catalog submission for Standard Laptops, Process Engine orchestration, automatic approval processing, and automated generation and routing of configuration tasks (SCTASK) directly to the Hardware assignment group.
Problem Statement	
Description	The current IT procurement process lacks efficiency and automation, resulting in delays and manual overhead in handling standard laptop orders. Configuration steps are prone to oversight or delay, leading to employee downtime and inefficient resource allocation.
Impact	Addressing these inefficiencies eliminates manual bottlenecks, prevents ordering delays, ensures newly procured hardware is promptly configured upon arrival, and improves overall transparency across IT procurement and fulfillment teams.
Proposed Solution	
Approach	Developing a low-code automated workflow in ServiceNow Flow Designer triggered by Service Catalog events. The flow runs under System User privileges in Global Scope to auto-

	generate catalog tasks, update assignment groups, and set approvals without manual administrative intervention.
Key Features	• Automated Flow Creation: Dedicated workflow ('Standard laptop task') configured in Flow Designer running as System User in Global Scope. • Service Catalog Trigger Integration: Event-driven execution instantly reacting to laptop order submissions. • Dynamic Catalog Task Generation: Auto-populates short description ('Laptop need to Configured') and assigns directly to Hardware assignment group. • Process Engine Workflow Binding: Replaces legacy execution plans by binding the automated flow to the Standard Laptop catalog item. • End-to-End Governance: Complete traceability across REQ, RITM, and SCTASK lifecycle with structured approval tracking.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware / Cloud	ServiceNow Cloud Instance	ServiceNow Cloud Developer Instance (Vancouver / Washington Release)
Computing Resources	Node / Container Allocation	Multi-tenant Cloud App Server (Dedicated JVM, High Availability)
Storage	Database Table Architecture	ServiceNow relational relational tables (sc_request, sc_req_item, sc_task)
Software / Platform	Automation Suite	ServiceNow Flow Designer, Workflow Studio, Process Automation Engine
Service Catalog Module	Catalog Configuration	Maintain Items, Service Catalog (Hardware Category, Standard Laptop Item)
Development Environment	Admin Studio / Workspaces	ServiceNow Studio, Classic UI Navigator, Flow Designer Builder
User & Group Data	Fulfillment & Approvers	Hardware Assignment Group, System Administrator, Approver (Eric Schroeder)
