

## Code-Layout, Readability and Reusability

|                      |                                                                                   |
|----------------------|-----------------------------------------------------------------------------------|
|                      | <b>Details</b>                                                                    |
| <b>Date</b>          | 15 March 2026                                                                     |
| <b>Team ID</b>       | SWTID-2026-7796                                                                   |
| <b>Project Name</b>  | Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer |
| <b>Maximum Marks</b> | 5 Marks                                                                           |

Code-Layout, Readability and Reusability: This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

| S.No | Code Quality Parameter    | Description                                   | Followed (Yes/No/Partial) | Remarks                                                                           |
|------|---------------------------|-----------------------------------------------|---------------------------|-----------------------------------------------------------------------------------|
| 1    | Consistent Indentation    | Uniform spacing/tabs used throughout the code | Yes                       | Maintained uniform workflow indentation in Flow Designer                          |
| 2    | Proper File Structure     | Files and folders are logically organized     | Yes                       | Configured within ServiceNow Global Scope under Flow Designer and Service Catalog |
| 3    | Meaningful Variable Names | Variables reflect their purpose clearly       | Yes                       | Clear naming convention used for flow ("Standard laptop task") and task           |

| S.No | Code Quality Parameter | Description                                   | Followed (Yes/No/Partial) | Remarks                                                                                          |
|------|------------------------|-----------------------------------------------|---------------------------|--------------------------------------------------------------------------------------------------|
|      |                        |                                               |                           | fields                                                                                           |
| 4    | Function/Method Names  | Functions are descriptively named             | Yes                       | Descriptive action blocks like "Create Catalog Task" and Service Catalog triggers                |
| 5    | Code Comments          | Inline and block comments explain logic       | Yes                       | Descriptions and short descriptions explicitly document task actions                             |
| 6    | Modular Design         | Code is split into reusable functions/modules | Yes                       | Separated into distinct milestones: Flow design, Process Engine linkage, and Request Fulfillment |
| 7    | No Redundant Code      | Duplicate or unused code is removed           | Yes                       | Removed default/unnecessary automations under Process Engine when linking the new flow           |
| 8    | Error Handling         | Exceptions and errors are handled gracefully  | Yes                       | Configured structured request and approval validation stages                                     |

### Reusable components/Modules :

| S.No | Component / Module Name | Language / Technology | Where Reused | Reusability Level (High / Medium / Low) |
|------|-------------------------|-----------------------|--------------|-----------------------------------------|
|------|-------------------------|-----------------------|--------------|-----------------------------------------|

| S.No | Component / Module Name                         | Language / Technology                 | Where Reused                                                            | Reusability Level (High / Medium / Low) |
|------|-------------------------------------------------|---------------------------------------|-------------------------------------------------------------------------|-----------------------------------------|
| 1    | Flow Designer Workflow ("Standard laptop task") | ServiceNow Flow Designer              | Linked to the "Standard Laptop" item under Maintain Items               | High                                    |
| 2    | Service Catalog Trigger Integration             | ServiceNow Process Automation         | Listens to Service Catalog events for instant execution                 | High                                    |
| 3    | Automated Catalog Task Generation (SCTASK)      | ServiceNow Core Actions               | Automatically assigns tasks to the Hardware group upon request approval | High                                    |
| 4    | Request & Approval Workflow                     | Service Catalog / Request Fulfillment | Handles user checkout (REQ/RITM generation) and approval processing     | High                                    |

### Overall Code Quality Assessment:

SMARTBRIDGE Date | 15 March 2026 Team ID | SWTID-2026-7796 Project Name | Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer  
Maximum Marks | 5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

### Code Layout Checklist:

| S.No | Code Quality Parameter | Description | Followed (Yes/No/Partial) | Remarks |
|------|------------------------|-------------|---------------------------|---------|
|------|------------------------|-------------|---------------------------|---------|

| S.No | Code Quality Parameter    | Description                                   | Followed (Yes/No/Partial) | Remarks                                                                                          |
|------|---------------------------|-----------------------------------------------|---------------------------|--------------------------------------------------------------------------------------------------|
| 1    | Consistent Indentation    | Uniform spacing/tabs used throughout the code | Yes                       | Maintained uniform workflow indentation in Flow Designer                                         |
| 2    | Proper File Structure     | Files and folders are logically organized     | Yes                       | Configured within ServiceNow Global Scope under Flow Designer and Service Catalog                |
| 3    | Meaningful Variable Names | Variables reflect their purpose clearly       | Yes                       | Clear naming convention used for flow ("Standard laptop task") and task fields                   |
| 4    | Function/Method Names     | Functions are descriptively named             | Yes                       | Descriptive action blocks like "Create Catalog Task" and Service Catalog triggers                |
| 5    | Code Comments             | Inline and block comments explain logic       | Yes                       | Descriptions and short descriptions explicitly document task actions                             |
| 6    | Modular Design            | Code is split into reusable functions/modules | Yes                       | Separated into distinct milestones: Flow design, Process Engine linkage, and Request Fulfillment |
| 7    | No Redundant Code         | Duplicate or unused code is removed           | Yes                       | Removed default/unnecessary automations under Process Engine when                                |

| S.No | Code Quality Parameter | Description                                  | Followed (Yes/No/Partial) | Remarks                                                      |
|------|------------------------|----------------------------------------------|---------------------------|--------------------------------------------------------------|
|      |                        |                                              |                           | linking the new flow                                         |
| 8    | Error Handling         | Exceptions and errors are handled gracefully | Yes                       | Configured structured request and approval validation stages |

### Reusable Components / Modules:

| S.No | Component / Module Name                         | Language / Technology                 | Where Reused                                                            | Reusability Level (High / Medium / Low) |
|------|-------------------------------------------------|---------------------------------------|-------------------------------------------------------------------------|-----------------------------------------|
| 1    | Flow Designer Workflow ("Standard laptop task") | ServiceNow Flow Designer              | Linked to the "Standard Laptop" item under Maintain Items               | High                                    |
| 2    | Service Catalog Trigger Integration             | ServiceNow Process Automation         | Listens to Service Catalog events for instant execution                 | High                                    |
| 3    | Automated Catalog Task Generation (SCTASK)      | ServiceNow Core Actions               | Automatically assigns tasks to the Hardware group upon request approval | High                                    |
| 4    | Request & Approval Workflow                     | Service Catalog / Request Fulfillment | Handles user checkout (REQ/RITM generation) and approval processing     | High                                    |

### Overall Code Quality Assessment:

| Aspect        | Rating (1-5) | Comments                                           |
|---------------|--------------|----------------------------------------------------|
| Code Layout & | 5            | Logically structured across Flow Designer, Service |

| Aspect                      | Rating<br>(1-5) | Comments                                                                                              |
|-----------------------------|-----------------|-------------------------------------------------------------------------------------------------------|
| Structure                   |                 | Catalog, and Process Engine components.                                                               |
| Readability                 | 5               | Clear naming conventions, structured stages, and descriptive task configurations.                     |
| Reusability                 | 5               | Modular design allows the automated workflow to be reused across standard hardware procurement items. |
| Documentation /<br>Comments | 5               | Well-documented activity steps, short descriptions, and task configurations.                          |
| Overall Score               | 5               | Excellent implementation fulfilling all project milestones cleanly and efficiently.                   |
